### Internal assembly

rechargeable. The positive electrode is made of high-purity lead, and the negative electrode is made of high-purity lead alloy. The electrolyte is a sulfuric acid solution. The battery is designed for deep cycle use and is suitable for applications requiring long life and high performance.

### Internal case features

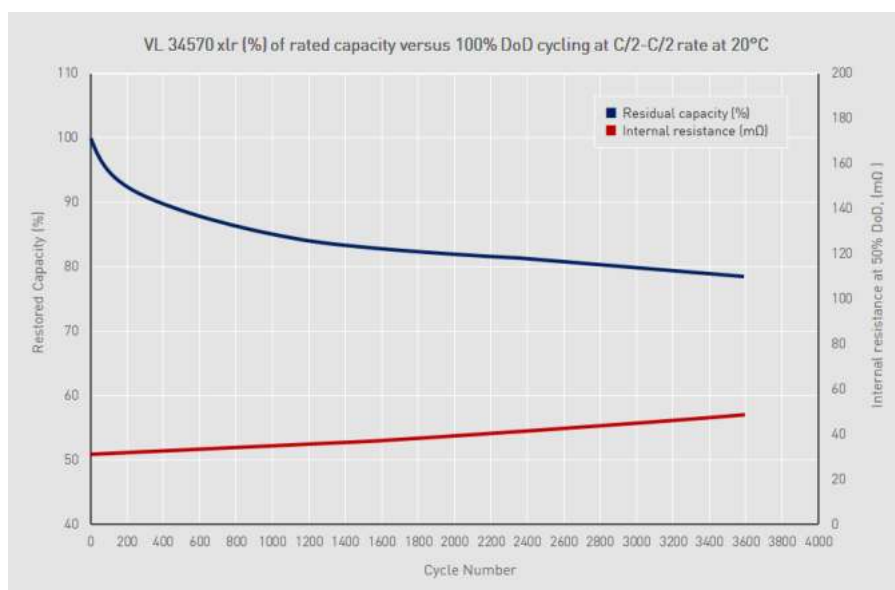

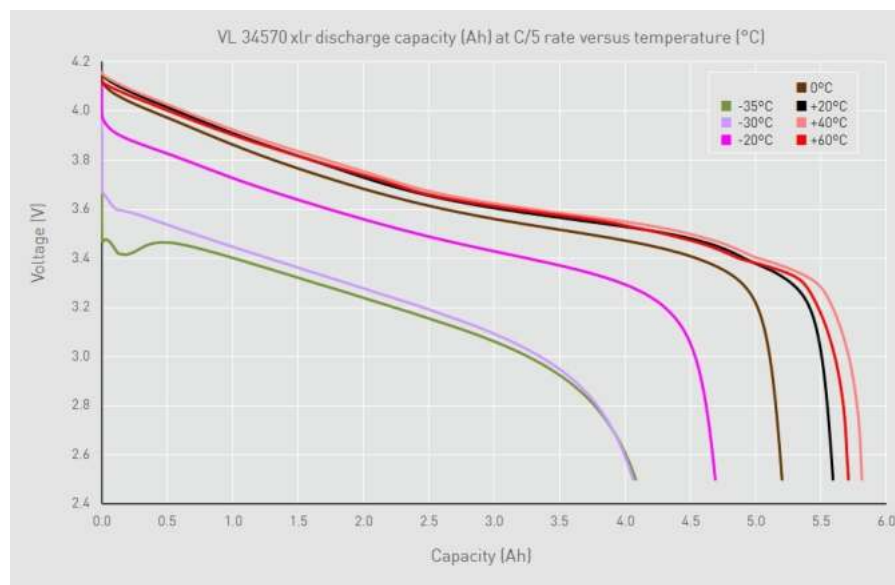

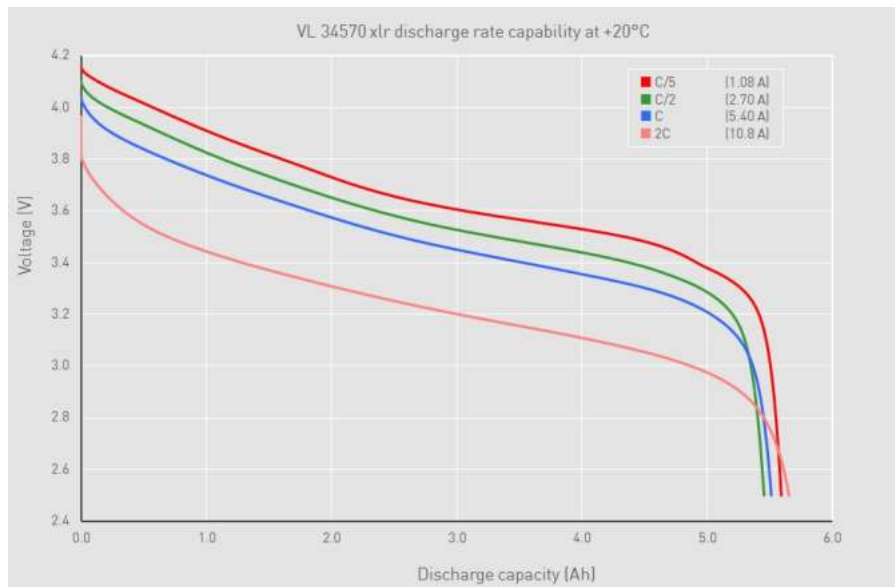

- The product is compliant with the RoHS directive.
- The battery is designed for deep cycle use and is suitable for applications requiring long life and high performance.
- The battery is designed for deep cycle use and is suitable for applications requiring long life and high performance.
